

Towards a safer world

**WHEN YOU GO IN HARM'S WAY,  
YOU WANT THE BEST TECHNOLOGY ON YOUR SIDE.**

Operating in a digitised battlefield against diverse and unconventional threats, today's forward observer must be properly equipped to fight a very different sort of war. We are leading this transformation through the design, development and integration of a cluster of advanced combat system technologies. Fully networked, this new-generation individual fire control and observation suite will endow improved situational awareness and enhanced lethality in all weathers, day and night.

**Giving the warfighter an unfair advantage. Tomorrow's technology is here today.**
