

Towards a safer world

SITUATIONAL AWARENESS. AT THE SPEED OF SOUND.

Whether it's building up the tactical picture on the battlefield, or providing point protection for a fixed base, uncovering the source of incoming fire is an operational priority. Using multiple acoustic sensor nodes and advanced data processing technology, our Hostile Artillery Locating System (HALO) provides rapid geo-location of mortars and artillery to enable immediate action. Offering exceptional accuracy and excellent discrimination of multiple firing locations, HALO is easily integrated into battlefield command and control networks, allowing rapid information dissemination to operational commanders and counter fire assets.

A sound investment for hostile fire indication. Tomorrow's technology is here today.
