SELEX Galileo joins the PXI System Alliance as an associate member

SELEX Galileo, a Finmeccanica Company and leader in defence electronics, has recently become an associate member of the PXI System Alliance (PXISA) organisation after adopting the use of PXI technology.

PXI is a modular instrumentation platform designed for measurement and automation applications and the PXISA is an industry consortium that promotes the PXI standard.

SELEX Galileo has been designing boards using the PXI standard since January 2010 and has recently launched the new Video Pattern Generator and Captor (VPGc) PXI board which is currently unmatched in performance in areas such as waveform generation.

The decision to design PXI-standard boards was due to SELEX Galileo's internal use of National Instruments Corporation's PXI platform and LabVIEW software environment. SELEX Galileo considers its new PXI boards, in conjunction with National Instruments' hardware and software environment, the baseline for future core test systems design.
